

GUS Newsletter

January-February 2015

HELLO!

You could see our latest activities early this year. Some are continuous works from last year.

Training on Composting at Summersari Waste Facility, Jembrana

Composting is a simple technology that is commonly chosen for treating organic waste in environmentally friendly ways. In general, more than 50% of household waste in Indonesia is organic. It is also common that the composition of organic waste in rural areas greater than urban areas.

Management of Waste Facility in Pasuruan, East Java Visit Temesi

The visit is a preliminary study since they are going to run such facility at their village.

Note:

More and more decentralized waste facilities are being built for the last few years all over Indonesia to tackle waste problem.

Festival Bank Sampah NTB

GUS visit the provincial scale festival held in Mataram. The development of waste banks in Indonesia is quite rapidly and becoming a popular option as part of an integrated solution waste problem.

Bye Bye Plastics Initiatives

GUS attend a collaborative meeting initiated by Bye Bye Plastics. Yes, we better work together to—at least—reduce plastic waste in Bali.

Mangrove Seminar and Planting with Kompas

The Mangrove-for-Nation planting took place at Mertasari beach, Sanur in February 13th, joined mostly by students.

Inauguration of Waste Facility at Desa Kesiman Kertalangu, Denpasar

It is more than a waste facility. The government of Denpasar also inaugurated this place as the Koperasi's office for all waste banks in Denpasar.
