

GUS Newsletter

March-April 2016

Hello!

For the last two months we met various parties who are also involved in waste management in Bali, let's see the details in this newsletter.

Discussion on Waste Bank

This discussion is related to the plans to establish a waste bank in Ungasan initiated by a university student which is also a local resident of Ungasan.

The trash problem in Bali is generally a management problem, associated with the bins, the transport and the process applied. The trash problem is also closely related to non-technical issues such as behavior, public policy, political will, and so on.

Bondalem Coral Day

On Earth Day—April 22, the community of Bondalem drowned 52 hexadomes in the sea. Hexadome is artificial substrate for coral reef habitat. The main goal is to preserve the coral reefs. It will also become a new dive site.

Visit to Temesi Facility

Temesi facility can be visited by anyone interested in waste management. There are parts of the facility specifically designated as a center for environmental education on climate change theme.

Opening of Decentralized Waste Facility in Klungkung

Decentralized waste facility on village scale can reduce the waste disposal to landfills. One such facility was recently opened by Bupati Klungkung in Desa Tangkas.
